

Institutional Integration

Deployment Protocol for Chronicle OS within Universities and Research Institutions

Document ID: COS-INS-2026-02 | Version: 1.0 | Date: 13 June 2026

IMARCH LTD offers a dedicated institutional deployment framework for the Chronicle OS ecosystem, designed specifically for universities, research institutes, and academic consortia. The framework is implemented through formal cooperation instruments, including Memoranda of Understanding and institutional partnership agreements.

Rather than relying on the fragmented registration of individual researchers, Chronicle OS enables institutions to establish an integrated participation model through the **Institutional Partnership Package**, providing coordinated access to publication, verification, and research management infrastructure.

Institutional Partnership Package

🏛️ Unified Verification Environment

A dedicated institutional verification environment is established for academic staff, researchers, doctoral candidates, and affiliated experts. Each participant receives a persistent digital research identity (Actor ID) linked to the institutional node.

📄 Institutional Publishing Capacity

Partner institutions receive access to a predefined publication allocation within the Chronicle OS Journal ecosystem. Submitted works may undergo automated deposition, metadata registration, cryptographic timestamping, and DOI assignment.

🔬 Vis Realitatis Applied Research Hub

Institutions may activate pilot access to the Vis Realitatis analytical environment for modelling and visualisation of complex interdisciplinary scenarios in medicine, transport, IT, social sciences and ecology.

Strategic Benefits for Universities

🎓 International Academic Visibility

Participation in one of the first institutional cohorts of a developing international research infrastructure operating under a United Kingdom legal framework.

⚙️ Digital Sovereignty

The possibility of operating an institutionally affiliated Chronicle OS node rather than relying exclusively on external commercial platforms.

🔐 Research Compliance and Priority Protection

Transparent registration of scholarly activity, cryptographic proof of priority, and enhanced support for authorship verification.

🌍 Access to Collaborative Funding

Eligibility to participate in international initiatives, consortium-based projects, and collaborative grant programmes.

📚 Support for Early-Career Researchers

Additional opportunities for students and early-career researchers to disseminate scholarly outputs through DOI-supported deposition mechanisms.

📖 Institutional Publishing Initiatives

Support for the publication of institutional monographs, proceedings, and thematic collections with integration into recognised open research repositories.

Deployment Process

1

Memorandum of Understanding

Execution of a formal cooperation framework

2

Institutional Node Configuration

Creation of institutional profiles and participant verification

3

Publication Framework Activation

Allocation of publication capacity and governance policies

4

Training and Onboarding

Workshops, webinars and support materials

5

International Integration

Incorporation into collaborative programmes

The average time to launch a pilot institutional environment ranges from two to six weeks, depending on the scale of the organisation.

Financial Framework

💰 Article Processing Charges (APC)

The standard APC is currently established at **£150 per article**. For partner institutions, partial or full waiver programmes may be available.

📦 Institutional Partnership Package

Institutional participation models are structured individually according to organisational size, anticipated publication volume, and scope of collaboration.

🎯 Grant-Supported Participation

Where appropriate, publication costs may be covered through institutional funding schemes, external grants, or dedicated support programmes.

Pilot Implementation

🏛️ UMSS (Ukraine)

UMSS is currently participating in the initial institutional integration programme and serves as the first pilot implementation case within the Chronicle OS deployment framework. Additional institutional partnerships are under discussion and may be announced following the completion of formal approval procedures.

Documentation and Participation

University leadership, research offices, and authorised institutional representatives may request the complete participation package, including:

- Draft Declaration of Intent
- Institutional cooperation framework
- Publication governance documentation
- Grant participation guidelines
- Compliance and deployment overview

Final Statement

Chronicle OS is not positioned as a conventional software product or a packaged publishing solution.

It is conceived as a **long-term institutional infrastructure** designed to support research governance, scholarly communication, publication transparency, and the coordinated development of digital academic ecosystems.

Through institutional participation, universities become active contributors to the evolution of an international research environment rather than passive consumers of external platforms.
